**Subject:** Re: 1st Quarter Water Data

Vicky,

I deleted the sample you wanted me to, and am not sure which samples you wanted to put the visual oil/grease measurement into.

The place to input flow hours for the DMR sites is called DMR FLOW PERIOD (red text). The default is set at 1 month, but you can change it to any number and change from months to days, hours, minutes, etc. depending on how long it flowed. If you like, I can put that information in this time around, just e-mail me the info. If you still don't see where to put this data, next time you come in I can show you.

Thanks,  
Dana

Dana and Pam, the water data is ready to be loaded into the database for Dugout, Solider and Banning.

However, in the Dugout file there is one file not oked which needs to be deleted, I tried but the message was that the file did not exist, will you see if you can erase it. Also, I could not get the visual oil and grease parameter to work and where to I put how many hours the flow discharged in the database. I looked but could not find it. Thanks, Vicky
